***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach a plurality of adjustable die mounting clamps having means for securing the die components anywhere on the roller of the rotary die cutter regardless of the threaded hole pattern in combination with other limitations set forth in claims 1 and 26.

Regarding claims 1 and 26, Sandford (5,515,749) teaches rotary die cutter for making a corrugated carton blank, from which a carton having at least one quick closing continuous closure panel can be erected, from a stock sheet of corrugated material. Sandford also teaches that the rotary die includes a plurality of at least five modular die components which are capable of being combined in multiple configurations for producing multiple carton sizes; the die components being mountable directly on a roller of a rotary die cutter where the die components are interlocked with one another, and each die component having at least one blade thereon for at least one of scoring, creasing and cutting a corrugated sheet to cooperatively form a corrugated carton blank in a rotary die cutter from a stock sheet of corrugated material. Sandford also teaches that the plurality of die components include, with reference to the three dimensions of the carton to be erected from the corrugated carton blank, at least one length die component which determines the length of the carton, at least one height die component which determines the height of the carton, and at least two closure panel die components which determine the width of the carton and produce respective fold-in panels of said at least one quick closing continuous closure panel. Sandford also teaches that each of the closure panel die components includes two slit/cut blades each arranged for

slitting a 45 degree angled line on a fold-in panel of a quick closing continuous closure panel ; two perforation blades each arranged to cut and score the corrugated stock sheet to form a perforated straight line that is perpendicular to the length of the carton blank; and one scoring blade arranged to score a straight line at the bottom of the fold-in panel, parallel to the length of the carton blank and between the two perforated lines formed by said two perforation blades. However, Sandford does not teach a plurality of adjustable die mounting clamps having means for securing the die components anywhere on the roller of the rotary die cutter regardless of the threaded hole pattern as set forth in claims 1 and 26.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claims 1 and 26.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
